

How it works at AICI:

Step 1:

Mood Board Inspiration:

Discover the magic of mood boards. Share your design vision with us, and our team will carefully curate a mood board that captures the essence of your style and preferences.

Step 2:

AI-Generated Interior Visuals:

Using your mood board as inspiration, our AI algorithms will generate stunning interior design concepts tailored to your space. Visualize how different color schemes and design styles would look, and experiment with various options without commitment.

Step 3:

Color Analysis and Brand Selection:

Our color experts will meticulously analyze the tones, undertones, and harmonies present in your mood board. Based on this analysis, we'll recommend specific paint colors from trusted brands like Valspar, available at B&Q stores across the UK.

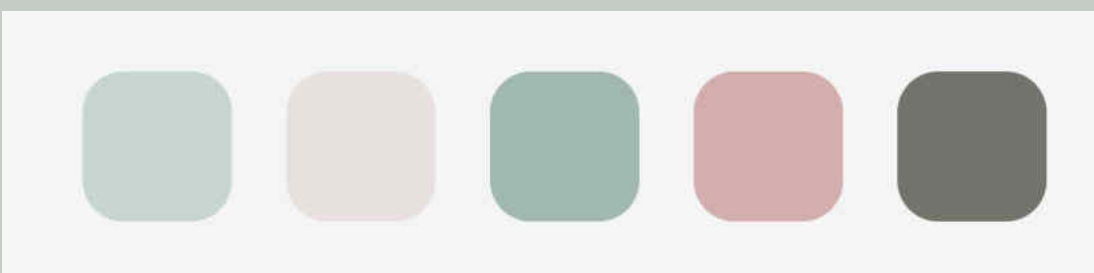

Step 4:

Custom Product Creation:

If your design includes custom furniture or decor pieces, our team can assist in bringing these unique elements to life, from concept to creation. Let your imagination soar, and we'll help you transform your vision into reality.

Step 5:

Cohesive Color Palette Delivery:

After refining and perfecting your color scheme, we'll provide you with a personalized palette, including specific color codes and brand recommendations, ensuring a polished, cohesive aesthetic throughout your space.
